

November 30, 2000

Current configuration for the Terra spacecraft is in nominal mode and all instruments are performing well in Science Mode. During the past week, 99.75 percent of all science data were successfully recovered.

Plans

The Flight Operations Team will continue to support the ASTER team in its late target acquisition change "dry runs" from November 28 through December 1.

There is a drag make-up maneuver planned for December 5. There is also a MODIS roll maneuver scheduled for December 15. The next Master Oscillator frequency adjustment will be on December 11.
